

11.1.2021 (Monday) - L.I. Can I recognise improper and mixed fractions?

What are improper and mixed fractions?

Improper and mixed fractions are used when we have a total of more than 1.

An improper fraction is where the numerator is greater than the denominator.

A mixed fraction is when part of the number is a whole and part is a fraction.

Can you write the improper and mixed fraction that is show on these diagrams?

Improper fractions - Count the number of sections in 1 whole to find the denominator and the number of sections highlighted to find the numerator.

Mixed fractions - Count the number of wholes and then find the number of parts that are highlighted to find the fraction.

1) $2 \frac{1}{5} = \frac{11}{5}$

2) =

3) =

4) =

5) =

6) =

7) =

8) =
