

How Do Clouds Form?

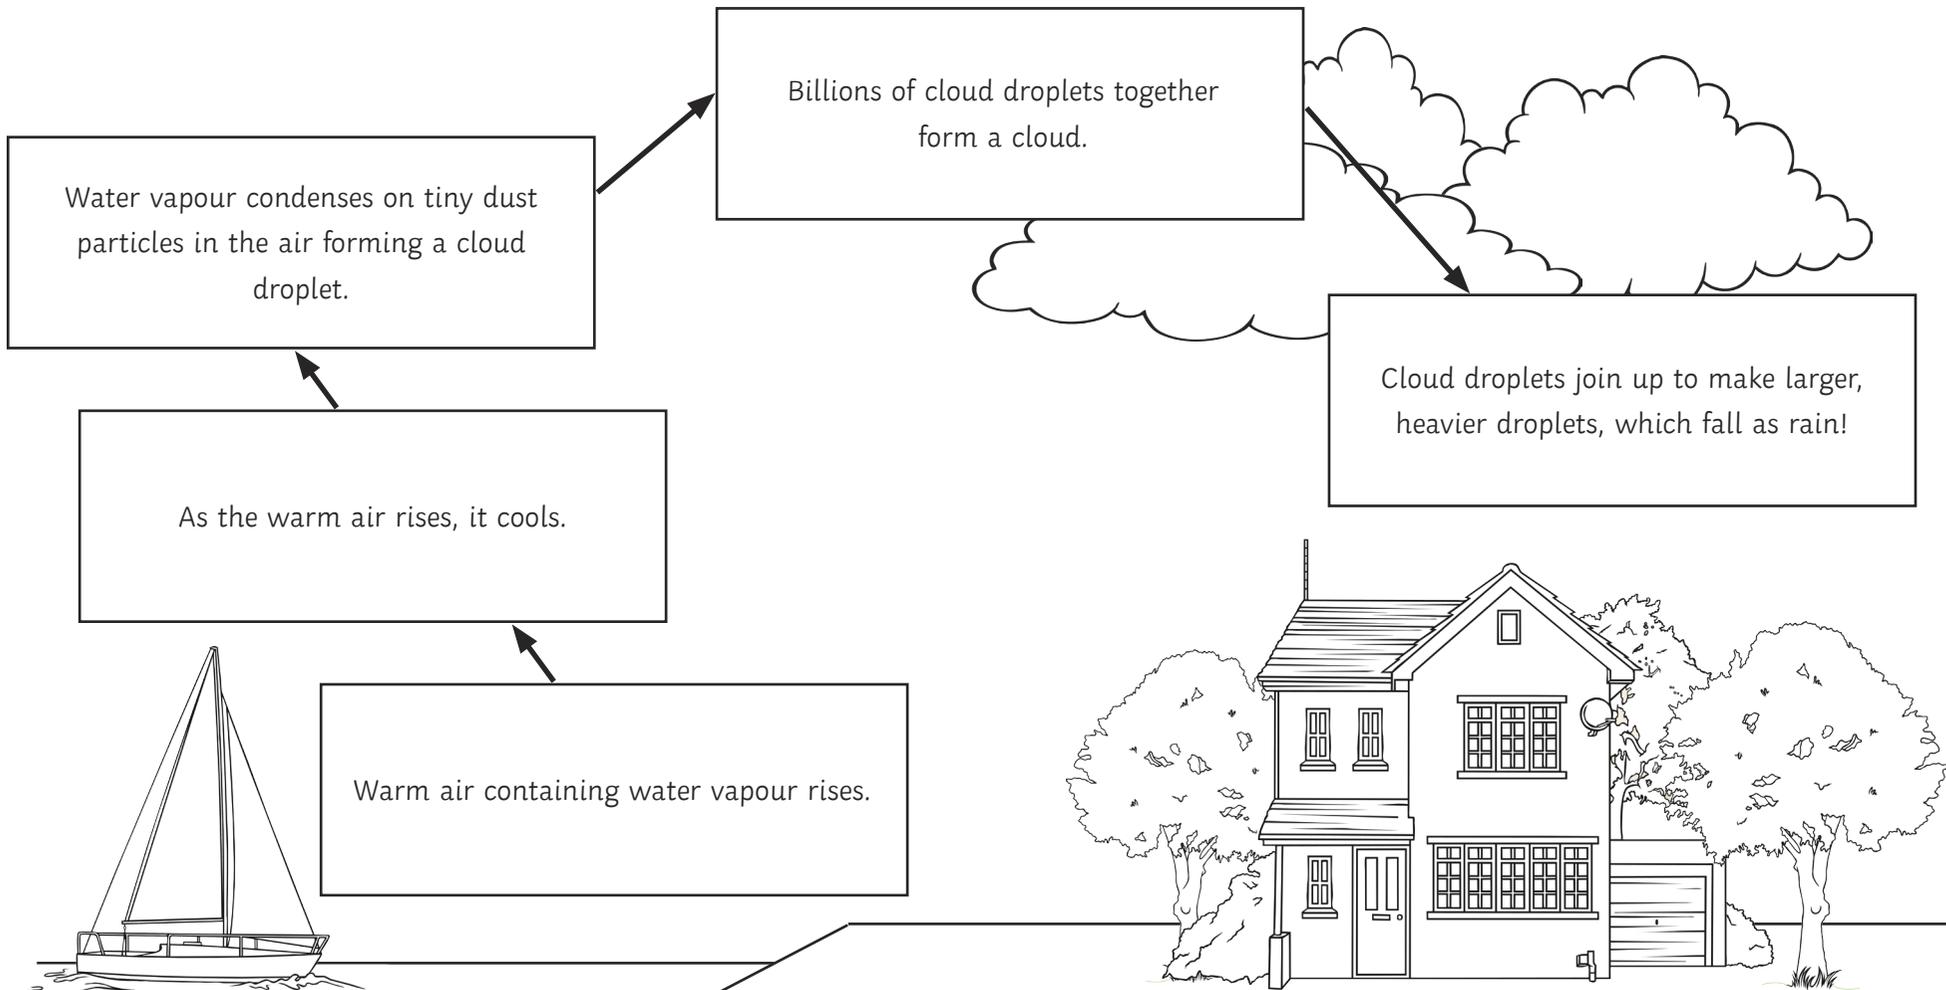

Write the correct statement in each box.

- A. Cloud droplets join up to make larger, heavier droplets, which fall as rain!
- B. Warm air containing water vapour rises.

- C. As the warm air rises, it cools.
- D. Water vapour condenses on tiny dust particles in the air forming a cloud droplet.
- E. Billions of cloud droplets together form a cloud.

How Do Clouds Form? Answers

Write the correct statement in each box.

- A. Cloud droplets join up to make larger, heavier droplets, which fall as rain!
- B. Warm air containing water vapour rises.

- C. As the warm air rises, it cools.
- D. Water vapour condenses on tiny dust particles in the air forming a cloud droplet.
